Scaling Up Nutrition: Supporting Country-led Efforts to Promote Healthier Lives

Kelly Ramundo/USAID

Through Feed the Future and the Global Health Initiative, the U.S. Government supports the Scaling Up Nutrition movement, which helps children in countries like Mozambique maximize their potential by staying healthy.

Back in June, I posted [here](#) about the negative impacts of global undernutrition as my colleagues and I prepared for Feed the Future's agriculture and food security Research Forum in Washington, D.C. This week, as I attend two meetings for the international [Scaling Up Nutrition](#) (SUN) movement during U.N. General Assembly week in New York, I'm moved to reflect once again on the issue because, quite frankly, we can't give it enough attention.

The numbers haven't changed since my last post, nor should our sense of urgency. The fact remains that two billion people in the world do not consume enough nutrients to live healthy, productive lives; and nearly 200 million children under age 5 suffer from chronic undernutrition.
